

Find and refactor all data clumps in the given files

// MathStuff.java

```
public void printLength(int x, int y, int z) {  
}
```

```
public void printSum(int x, int y, int z) {  
}
```

"

// Library.java

```
private boolean sign;  
private double mantissa;  
private int exponent;
```

// MathUser.java

```
private boolean sign;  
private double mantissa;  
private int exponent;
```

The source code contains
methods and field for mathematical operations
